The World Bank's Debt data

Personal loan is a thing we all know. Many don't know what a country can take a loan as well. A country may also take debt to manage its economy. Countries can spend money on infrastructure taken loans from different organizations as spending is one costly ingredient required for a country's citizens to lead comfortable lives. The World Bank is the organization that provides debt to countries.

In this exercise, we are going to analyze international debt data collected by The World Bank. The dataset contains information about the amount of debt (in USD) owed by developing countries across several categories. We are going to find the answers to questions like:

- What is the total amount of debt that is owed by the countries listed in the dataset?
- Which country owns the maximum amount of debt and what does that amount look like?
- What is the average amount of debt owed by countries across different debt indicators?

Tips and questions:

- Step 1) Check the total tables and select the first 10 to have an idea about the data
- Step 2) Check how many distinct countries are there?
- Step 3) Finding out the distinct debt indicators
- Step 4) Whats the combined debt in this data?
- Step 5) Which country owns the maximum amount of debt and what does that amount look like?
- Step 6) What is the average amount of debt owed by countries across different debt indicators?
- Step 7) The highest amount of principal repayments
- Step 8) The most common debt indicator?
- Step 9) What are some viable debt issues and conclusion?
